

WoodEvo.

A scenic view of colorful beach huts on a grassy dune overlooking the ocean, with a wooden deck railing in the foreground. The huts are painted in vibrant colors: light blue, dark blue, yellow, and green. The ocean is visible in the background under a cloudy sky. The foreground shows a close-up of a wooden deck railing with a natural wood grain pattern.

COMPOSITE DECKING BROCHURE

Who we are

WoodEvo's goal is simple. Wood. Evolved. Make durable, long lasting, low-maintenance decking, cladding and screening solutions - that won't break the budget.

With this goal in mind, we teamed up with China's leading decking manufacturers, leveraging years of learning and development. Specially designed to withstand Australia's harsh climate - WoodEvo created two distinct product ranges.

We first launched the HOME range, providing amazing value for money with a natural looking, durable, Wood-Plastic Composite. Focusing on what's most important to Australian families, we made sure HOME stays cooler in the sun, is safe even when wet and is durable enough to allow easy cleaning with a pressure washer. With HOME you can enjoy peace of mind with a 25 year warranty.

ADVANCED is for those looking for the best at a reasonable price. Sharing all the same benefits as HOME - The PVC core goes further offering class leading cooling technology. Its ASA capping features a realistic wood-grain finish, exceptional UV and scratch resistance, as well as being Australia's most slip resistant decking. ADVANCED offers commercial grade performance and is backed with a long 30 year residential warranty.

We look forward to welcoming you into the WoodEvo community.

Which range is right for your project?

HOME

Wood Plastic Composite

Hardwearing & Low Maintenance

HOME offers a stylish and reliable decking solution for Australian families seeking quality at an affordable price. Featuring a natural timber texture and a choice of 8 stunning colours, there's an option to make every outdoor living area shine.

Quality Material & Clever Design

Crafted from quality hardwood timber fibres and recycled plastic - HOME decking outperforms other Wood Plastic Composites (WPCs) with its unique M-Shape profile. Keeping costs down & staying cooler in the sun.

Capping - Tough & Protected

HOME's extra thick HDPE capping provides a hard layer of protection. Made to last, HOME offers excellent scratch & fade resistance. The R11 slip rating is safe for ramps & around pools.

BASALT HOME

Two technologies,
one amazing new deck.

ADVANCED

Foamed PVC Composite

Premium Performance

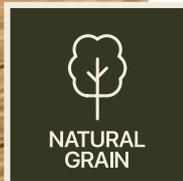

WoodEvo ADVANCED steps up the latest PVC technology to deliver the most realistic timber grain with unmatched durability. Featuring 5 incredible colours - ADVANCED combines commercial grade performance with designer aesthetics.

Lightweight & Coolest Underfoot

Made with a 100% wood-free foamed PVC core ADVANCED has lower heat retention and improved dimensional stability. This cutting-edge technology ensures long-lasting performance in Australia's extreme conditions.

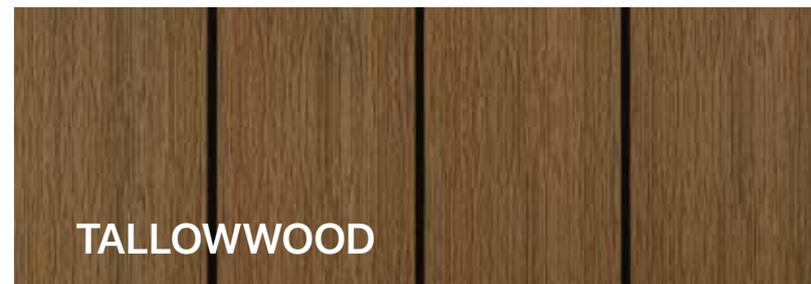

ASA Capping - Max Anti-Slip

ADVANCED's capping provides industry leading fade resistance. ASA is made to absorb impact for exceptional scratch and abrasion resistance. Enjoy peace of mind with Australia's highest slip rating (P5 and R13) - perfect for pools or commercial projects.

How to order

1 See the boards

You can request free samples online, or even better, see larger displays at a local showroom. This will give you a great idea of what your WoodEvo deck will look like.

2 Get a quote

Supply & install

Head over to the 'Installers' page on the WoodEvo website. You'll find a list of Accredited Installers in your area who can organise a free on-site measure & quote. Your installer will handle everything and give advice on design options such as seats, stairs, curves and more.

Materials only

Check out the 'Where to Buy' page on the WoodEvo website. You'll find a list of stores who stock WoodEvo and can provide trade or retail pricing for your project.

Frequently Asked Questions

How does WoodEvo perform on hot days in full sun?

WoodEvo decking stays cooler, even on hot days. HOME combines the unique 'M' profile with high quality hardwood fibres in its core - making it lighter and cooler under foot than other wood-plastic composite decking brands. ADVANCED goes further with its lightweight foamed PVC core and ASA capping, providing class leading cooling. The ASA capping acts as a thermal insulator, keeping the surface cooler to the touch, even in direct sunlight.

How slip resistant is WoodEvo? Is it suitable around pools?

WoodEvo decking is highly slip-resistant, even when wet. HOME achieved an R11 slip rating, making it suitable for outdoor ramps according to Australian building codes and proving its safety in wet conditions. ADVANCED is Australia's most slip-resistant deck board, with top-rated P5 and R13 ratings, making it perfect for poolside areas and ensuring maximum safety.

How scratch resistant is WoodEvo? Is it suitable for homes with pets?

Both WoodEvo decking ranges are highly scratch resistant, making them ideal for pet owners. HOME's durable HDPE capping keeps your deck looking beautiful, while ADVANCED features a flexible ASA capping that absorbs impacts and minimises scratches, ensuring the very best protection for your deck even with active pets.

Does WoodEvo fade?

WoodEvo decking resists fading, maintaining its vibrant colour for years. HOME features advanced UV inhibitors and a durable capping, backed by a 25-year warranty. ADVANCED goes further with its ASA capping, a material specifically designed to resist fading. WoodEvo has honed this technology to new heights, providing unmatched protection and a 30-year fade warranty, ensuring long-lasting beauty under the harsh Australian sun.

How much does WoodEvo expand and contract?

WoodEvo decking was designed with Australia's extreme conditions in mind. Utilising cutting edge technology and high quality materials, both HOME and ADVANCED handle temperature changes with minimal expansion and contraction. By following our design and installation guides, WoodEvo decking maintains consistent gaps, remaining stable in Australia's diverse climate.

Do I have to use an accredited installer or can I use my own tradie, or DIY?

You can use an installer you have sourced yourselves or DIY. You must follow the design and installation guide to ensure the warranty is maintained. Where possible we do recommend using an accredited installer as they have demonstrated their skill & experience with the WoodEvo range.

Does WoodEvo decking warp, cup, split or otherwise malform?

No, WoodEvo's warranty protects against warping, cupping, splitting and even colour fade.

How do you install WoodEvo?

WoodEvo is installed using our specially designed clip system. We have an installation guide for both the HOME and ADVANCED ranges which can be found at woodevo.com.au

What is the minimum clearance for WoodEvo?

WoodEvo HOME should have 150mm clearance over soil. WoodEvo ADVANCED can be installed as low as 30mm using H4 grade timber or metal joists. When installing below 150mm including over concrete we recommend using LOWDECK Joists. These are specially designed for ultra-low height decks. LOWDECK Joists are H4 treated, double primer sealed and backed by a 50 year guarantee against rot & insect attack even when on the ground.

Where can we purchase the boards?

We have stores across Australia and you can find a store near you at woodevo.com.au

Installation Guides

WoodEvo is quick and easy to install. WoodEvo's clipping system offers a simple and economical installation method. The standard clips provide a 5mm spacing between boards and are available to suit installs on either timber or metal joists. For BAL29 Bushfire applications clips are available in a 2.5mm for the ADVANCED range and 3mm for HOME.
